## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-34 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for electronic elements such as wires and optical

Art Unit: 2877

fibers, does not reasonably provide ennoblement for electronic circuitry such as electronic sensors, multi-component filaments viz, weaving, knitting, crocheting, knotting, stitching or combination thereof. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to comprehend the scope of invention on whether the scope of "invention" is about chemical composition, memory allocation, knitting or fabric technology, optical technology, optical fiber fabrication, display technology, or sensor technology, the invention commensurate in scope with these claims. Segments of the claim relating to claims 5-8.

4. Claim 1-34 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The limitations of the independent claim 1, such as 'some of the elements in portions of said fabric-like structure are adapted for absorbing electrical, chemical, mechanical or optical energy or by interacting with each other by an exchange of energy of the aforementioned kind'. The limitations of the independent claim 33, such 'whereby the circuitry is realized with the elements intersecting in physical or near-physical contact in the fabric-like structure, said elements being made of transparent, non-transparent conducting, semiconducting or isolating materials and/or combinations thereof. Other dependent claims such as claims 15 (the limitations such as cladding comprising at least one organic semiconducting material), claims 21-23 (the

limitation an apparatus is a two or three-dimensional opto-electronic display), claim 31 (the limitation one or more of the discrete devices are a physical or chemical sensors).
